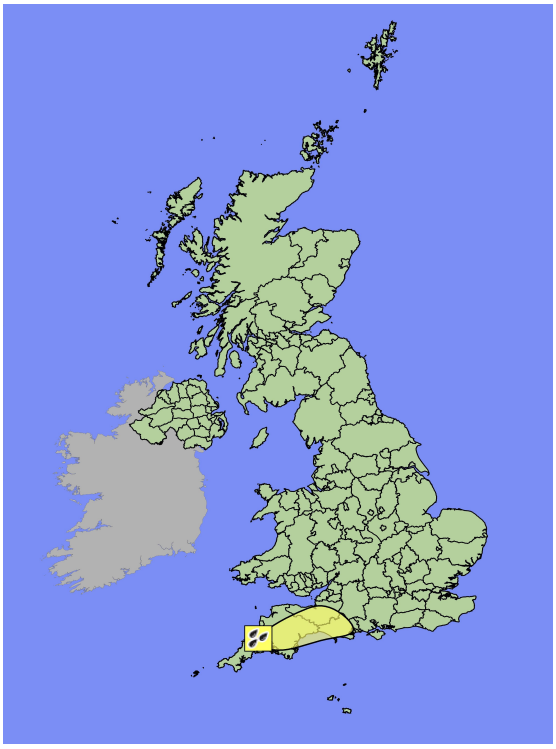
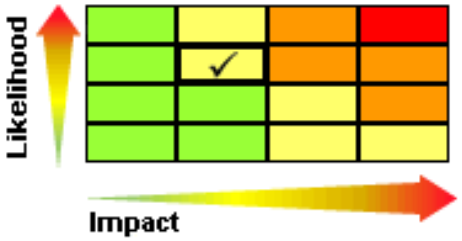
# National Severe Weather Warning Service





**Chief Forecasters Assessment**
Friday will bring a situation favourable to generation of slow-moving narrow lines of showers, referred to in the trade as convergence zones. These zones will potentially see rainfall amounts exceeding 10mm in 1 hour or perhaps 25mm in 3 hours, which may lead to local flooding issues given recent rainfall and saturated ground. It will be one of those days, where many places on either side of these zones will get away with a fair share of dry, bright weather.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **12:00 on Fri, 27th Apr 2012** until **20:00 on Fri, 27th Apr 2012**

Slow-moving thundery showers are expected to develop in places on Friday, bringing localised downpours and hail.

The public should be aware that given recent wet conditions, these downpours may lead to surface flooding, and both this and hail could cause tricky travel conditions.
